

BUSSELTON BEACHFRONT ROCK SEAWALL

Following inspections of the coastal protection structures along the Busselton foreshore it was identified that the Busselton Beach Front Seawall was in a deteriorated state and a major refurbishment was needed. The refurbishment of this seawall was prioritized as part of a 5-year strategic maintenance program for the Busselton foreshore.

Shore Coastal was engaged by the City of Busselton to provide the detailed design, specification, project management and construction supervision services for the refurbishment of the seawall. The refurbishment involved placing granite rock over the existing ironstone seawall to provide additional protection and the first stage of the beachfront enhancement project was successfully completed in 2011.
